Dear Peters

I'm ever so grateful to you for your letter of the 12th, andmore for your comments than for the translation from the Grundrisse, because it gives me a view not alone of your thoughts, which are important enough, but of the whole miliou of Graman Marxism. I do not begrudge Rosa Luxanburg her greatness as a revolutiousry, and the originality of many elements of her thought. But you cannot be serious if you think Hegel meant little to her. Shemey not have liked him as well as the others who were full of praise of him, but did nothing serious with the source of all theorys the proletarist. But one letter, exong others, wands out in my mind because at that time-many, many years ago. I still had not rejected Lanin's Materialics and Empirio-criticism, and here she was writing to louise Kautsky shout the manuscript which evidently had just been received, to the effect that it is real sophomorie stuff, but since, no doubt, Lenin meent well, it is best not to insult him. I wish she had taken him seriously enough to write the most demning criticism. Then we really at would have something to go on philosophically.

And it surely isn't true that Laussile "knew" Hogel as well as Marx; he knew the terminology, that is all. Marx said it perfectly when he said he was trying "to apply" Regel like a schoolnoy, and, in the process, had phosen a bourgeois, instead of a proletarian hero, to dramatize. One cannot "apply" Regel; one must represe him on materialist, humanist materialistic basis a la Marx.

My "obsession" with Hegel reappears at each critical turning point in history when the concrete descriptions of Marx on capitalism have exhausted thomselves—like the descriptions merely of concentration and centralization of capital had exhausted itself at the time of the appearance of imperialism and collapse of Second, which sent leads to Hegel. This time it isn't marely Marcuse that is befuddled by Automation; and the mare restatement of Marx on the declining rate of profit counct stop everyone from Chraunists who pervert to the scholars who cannot grasp, to be "taken in" by the fact that machines, instead of men, are still the producers of value and surplus value. In the case of Lenin, what helped him restate both his problems was the "little" Hegelian law of transformation into opposite, unity of opposites, identity of opposites because it means he could deal both with capital and labor, aristoracy of labor. In our age it is the unity of theory and gractice, or the mark Subject's" relationship to objectivity, or the second negation—the whole Dectrine of the Notion as the realm of theory. Spinoza cannot help here, because he lived at a different age than Hegel who had the fortune of living in the period of the French Revolution and Napoleon, and therefore his thought inholded those absolutes; revolution ard counter—revolution. I'll convince yet one day as I approach greater clarification in the writing of the new book.

Marcuse understands nothing of economics —or the proletarist. But, he is excellent in portraying the whole of the contradiction of the intellectural "wanting" revolution, but being an ivery tewer so isolated from the factory that he goes for "language", including that of co-called "Soviet Marxism." The parts from the Grandrisse that he quoted was to show that Automation is not doing everything now, is not abolishing value production that is, because, under capitalism, it can only be "partial, arrested." (His caphasis) If he had confidence in the proletarist and none other abolishing value production, he wouldn't constantly have to run to the Grandrisse instead of CAPITAL which is all the clear on Working Day, on "negation of negation" as proletarist negating, on fetishism of commodities never having been fully seen even by Marx until after the Commune revealing the form, not only the fetishistic form of commodities hiding dead labor's domination of living labor, but still the free, spontaneous, form of the Peris Commune deciding everything for itself.

Sorry I disturbed so, but thank you very, very much.
